

## How do other treatments compare to Harmony IPL and AFT Photorejuvenation?

While there are lasers that treat red spots, other lasers that treat browns, and others that are used for resurfacing facial skin, no technology provides the long-term improvement of complexion and texture of the Harmony AFT Photorejuvenation program – all without the slightest interruption to your busy lifestyle.

## What conditions can Harmony AFT Photorejuvenation treat?

### Imperfections from Sun Damage and Photo-aging.

Enlarged pores, dull complexions and other facial imperfections or abnormalities can detract from your well being and appearance, no matter how healthy and young you feel. Harmony AFT technology improves both the superficial and deeper skin layers and rejuvenates the skin while at the same time delivering beneficial thermal energy to deep tissue. After a series of Harmony treatments, you can see a significant reduction of unwanted pigmentation and the appearance of smoother, revitalized skin.

The same Harmony treatment can be used effectively on the neck, the chest and the hands.

### Benign Vascular Lesions Broken Veins and Capillaries

The face has an extensive network of veins and tiny blood vessels called capillaries.

Over time, aging, trauma, sun exposure and certain lifestyle factors cause a number of them to break appearing as red streaks or blotches on the face. Harmony AFT therapy can eliminate damaged veins and capillaries by removing virtually all traces of these unsightly blemishes.

### Symptoms of Rosacea

Rosacea is a skin ailment that leaves people red-faced from dilated blood vessels and chronic flushing. Rosacea can also cause pimples and/or blisters on the nose and cheeks.

For women and men, Harmony AFT can successfully treat dilated blood vessels and redness without injuring the surrounding healthy skin, while greatly reducing the episodes of blushing with long-term effectiveness.

## Rejuvenate your face and skin non surgically

The skin is the largest organ in our bodies.

It protects us from infection and shields us from harmful substances. However, as we age, the effects of the Australian sun, wind, toxins in the air, and our hormones take their toll on the appearance of your skin. It's not as smooth as it was when you were younger. At first, fine lines appear around our eyes and lips. Then as the collagen beneath our skin wears out, deeper wrinkles begin to appear, as well as pigment discoloration. Now with Harmony AFT technology (Advanced Fluorescence Technology) you are able to reduce wrinkles around the eyes, lips, forehead and cheeks.

In addition sun damaged skin and facial scarring can also be successfully treated.

### HARMONY Photorejuvenation with AFT for Facial Skin Imperfections and Blemishes

Imagine a more youthful looking you... Both the pleasures and stresses of life, along with the simple passage of time, tend to cause our skin to appear older. The signs of aging and sun-damage are typically most visible on OUR face. While numerous treatments from simple creams to major surgeries exist to improve various facial flaws, skin specialists have always sought dramatic improvement with low risk and no 'downtime'. Additionally, many conventional treatment options can only address one condition at a time, while they entail a prolonged recovery time, considerable pain and potential side effects.

Harmony AFT Photo rejuvenation is a non-invasive treatment that erases skin damage without disruption of the skin's surface, hence, no "downtime". Intense Pulsed Light

can simultaneously treat a wide range of facial concerns safely and effectively, such as broken capillaries, skin discoloration, age spots, freckles, mottle pigmentation and the symptoms of Rosacea.

### What is Intense Pulsed Light?

Intense Pulsed Light with AFT technology is a treatment breakthrough that can correct a variety of benign skin conditions such as facial skin imperfections, the signs of aging, birthmarks, unwanted hair, unsightly small veins and other blemishes. It offers a safe, non-invasive solution that can be tailored to your individual condition and skin type, providing superior cosmetic results and outstanding satisfaction. This new procedure is called Photorejuvenation.

### How is the Harmony Photorejuvenation procedure performed?

A cold gel is usually applied to the area to be treated and you may be given dark glasses to protect your eyes from the bright light. The smooth glass surface of the Harmony handpiece is gently applied to your skin and pulses of light are applied. You may feel a slight sting, like the snapping of a small rubber band. An anaesthetic cream may be used but is seldom required.

Treatment is generally administered in a series of procedures that provides excellent long term results, minimal adverse effects and high satisfaction. Each treatment takes about 20 minutes, depending on the area to be treated.

### Why are multiple treatments necessary?

Depending on the number of conditions you are treating and the severity of the individual problem, a series of five or six treatment sessions may be recommended. You can return to work the same day and resume all your regular activities. By dividing the full program into several treatments, the procedure provides gradual improvement with very low risk – and, it preserves the wonderful "no downtime" feature that people appreciate so much.

# Harmony Case Studies

## Female early fifties

This patient was suffering heavy skin pigmentation and sun spots on the back of her hands. The skin pigment was restored and general skin condition improved after three Harmony AFT treatments.

## Female early sixties

This patient was suffering from Lentigo and pigmentation from sun damage. The Lentigo was removed and general skin condition improved after two Harmony AFT treatments.
